## SUMMARY

I am a Senior Drupal developer specializing in D7 & D8 development for **7+ years** and React development for **2+ years**. Building web solutions for non-profit and private enterprises like the UN's World Food Programme, Concern Worldwide, Systemseed, AzRy, Entando and more. In total I am counting **9+ years** of web development experience.

I have experience with building custom Drupal 7/8 modules and themes. Integrating Drupal solutions with various 3rd party services and building APIs with headless Drupal using REST API and JSONAPI modules to build React powered frontend solutions and components.

I am familiar with package management using composer and npm, experienced in git-flow approach and have many years proficiency in web technologies, languages and services like: PHP|Drupal|Symfony, Javascript|React|NodeJS|JSON APIs, HTML|CSS/SCSS, Acquia|Pantheon|Platform.sh.

I am using fully Dockerized development environments, utilizing docker4drupal and similar solutions for effective DevOps processes. Familiarity with Docker gives me ability to fully automate development processes and share better development experience among the team members.

## LATEST OPEN SOURCE ACTIVITIES

- [Girchi Portal](#) – Voluntarily Managing Drupal 8 development team for Libertarian political party that wants to become fully digital.
- [Entando App Builder](#) – Web development platform built using React for enterprise application development.
